

	Title: Energy Efficiency Policy	
	Document No: P 21	Revision: 1
	Date: 11/01/2026	Approved by: Derek Mulveen

Energy Efficiency Policy

At Dominic Lydon Steel, we recognise the importance of using energy efficiently and reducing the environmental impact associated with our energy consumption. We are committed to improving energy efficiency across our operations and promoting responsible energy use among our employees.

Scope

This policy applies to all operations, sites, and activities of Dominic Lydon Galway Ltd where water is abstracted from surface water or groundwater sources for operational, construction, cleaning, or other business-related purposes.

Policy Aim

This policy provides a framework for managing and reducing energy consumption across our operations.

Our Commitments

- Monitor and review our energy consumption to identify opportunities for improvement.
- Reduce unnecessary use of electricity and fossil fuels.
- Improve the energy efficiency of machinery, equipment, vehicles and buildings where practical.
- Switch off lighting, machinery and equipment when not required. Promote responsible energy use and energy efficiency awareness among employees.
- Consider energy efficiency when purchasing new equipment and replacing existing equipment. Increase the use of renewable energy where practical and commercially viable.
- Set objectives and targets where appropriate to improve energy performance.
- Comply with all applicable legal and other energy-related requirements.
- All employees have a role in reducing energy consumption and are encouraged to report energy wastage and suggest opportunities for improvement.

This policy will be communicated to employees, reviewed annually and updated where necessary to ensure it remains appropriate to our operations and objectives.
