## **Green House Gas Emissions Policy**

### **Policy Aim**

Dominic Lydon Steel Galway Ltd recognises the importance of reducing greenhouse gas (GHG) emissions and the role we have in supporting the transition to a lower-carbon economy. This policy provides a framework for measuring, managing and reducing the greenhouse gas emissions associated with our operations, energy use, transport, materials and supply chain.

### **Our Commitment**

We are committed to:

- Monitoring and reviewing our Scope 1, Scope 2 and relevant Scope 3 greenhouse gas emissions.
- Improving the energy efficiency of our operations and reducing unnecessary energy consumption.
- Increasing the use of renewable energy where practical and reducing our reliance on fossil fuels.
- Reducing emissions associated with company vehicles, transport and the movement of materials.
- Promoting efficient use of steel, raw materials, water and other resources to minimise waste and associated emissions.
- Supporting the recycling and recovery of steel and other suitable materials in line with the waste hierarchy.
- Working with suppliers and contractors to encourage lower-carbon practices and responsible sourcing.
- Giving preference to steel suppliers that meet recognised environmental, quality and sustainability standards, including CARES certification where applicable.
- Considering greenhouse gas emissions when making purchasing, operational and investment decisions.
- Raising employee awareness of energy efficiency, waste reduction and actions that can help reduce emissions.

## Our Goals

Dominic Lydon Steel will work towards:

1. **Reducing energy-related emissions** through improved energy efficiency and increased use of renewable energy.
2. **Reducing fossil fuel consumption** across our operations and identifying opportunities to transition to lower-carbon alternatives.
3. **Reducing transport-related emissions** through efficient logistics, vehicle management and consideration of transport distances and modes.
4. **Reducing material waste** and maximising the recycling and recovery of steel and other materials.
5. **Improving our emissions data** through annual monitoring of Scope 1, Scope 2 and relevant Scope 3 emissions.
6. **Working with our supply chain** to understand and reduce the carbon impacts associated with purchased steel and other significant materials.
7. **Continuously improving our GHG performance** by setting objectives and reviewing progress as part of our environmental and sustainability management processes.

## Monitoring and Improvement

Our greenhouse gas emissions performance will be reviewed on an annual basis. Where practical, emissions will be assessed against production levels to help monitor improvements in emissions intensity over time.

The results of our monitoring will be used to identify areas for improvement and establish appropriate objectives and actions. Progress will be reviewed by management and incorporated into our wider sustainability and environmental improvement programmes.

We recognise that reducing greenhouse gas emissions is an ongoing process and are committed to continuous improvement in our environmental performance.

## Responsibility

Management is responsible for ensuring that this policy is implemented and reviewed. All employees are encouraged to support the company's efforts to reduce energy consumption, minimise waste and prevent unnecessary emissions.

This policy will be communicated to employees and reviewed annually, or sooner where significant changes occur to our operations, legislation or sustainability objectives
